

### Keep Things Firmly under Control

**Nowadays most information exists in a digital format. Thus, it is easier to be stolen. It is not that someone tries to open your cabinet or safe with a crowbar. Sometimes just a few mouse clicks are enough.**

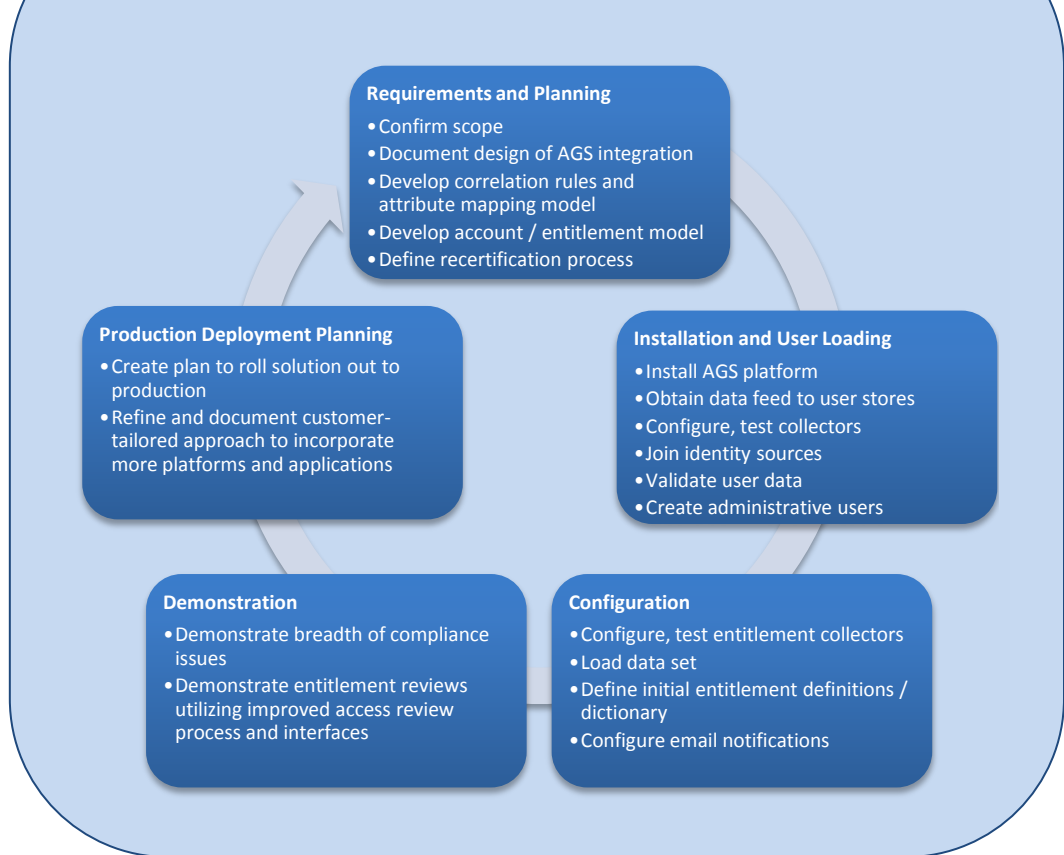

Think about your information security. Who has how much access to your critical corporate data? Do you know how to control the level of access? Our Access Governance Assessment gives you answers to these questions.

We will help you reduce the risk of data abuse. And, with the right Access Governance solution, you are able to act proactively which can save you a lot of trouble and money.

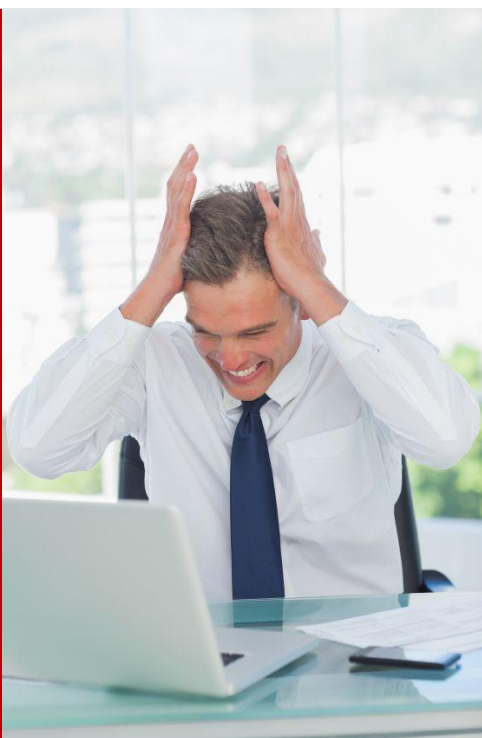

## Control User Access

AVIANET Access Governance Assessment helps you to control the level of access different users have. Think of your employees, partners, and suppliers – should they all have the same access to your corporate data? It is better to control the level of data to not lead anybody in temptation.

### Our Steps in the Access Governance Assessment:

You cannot **protect your corporate data** unless you managed the **access**.

Our holistic approach includes giving users the appropriate access to resources (e.g. data, software, networks) through authorized channels. We will provide those user accesses in a recurring manner. Thus, you will reduce data abuse – internally and externally. Repeatedly we will also control that critical systems are in compliance. Another part of the Access Governance Assessment is the improvement of specific

processes like auditing, reporting and certification. In addition, we will address relevant information security compliance requirements. Profit furthermore from cost savings due to the integration of access governance platforms. Your IT staff will be able to refocus of core projects and only has to care about access governance issues to a limited extent – which will save time and expenses.

## Overcome Complex Business Challenges

Choose AVIANET as your partner for the assessment of the best possible Access Governance to your business. According to the *Verizon 2014 Data Breach Investigations Report* breaches occurred in 2013 due to:

- 35% Web App Attacks
- 22% Cyber-espionage
- 14% Point-of-Sale Intrusions
- 9% Payment Card Skimmers
- 8% Insider and Privilege Misuse
- 4% Crimeware
- 2% Miscellaneous Errors
- <1% Physical Theft / Loss
- 0% DoS Attacks
- 6% Everything else

These statistics illustrate how important a good Access Governance Assessment is. Only thus you can reduce the risk of data abuse. Be prepared so that your business can run smoothly.

Do not open the doors for **breaches**. Be one step ahead.

We will help you to understand where your **most sensitive information** is located and who has access to it.

This solution is brought to you in collaboration with Verizon.

Verizon delivers a wide range of Cloud, Security, Machine-to-Machine, Mobility, Networking, and Advanced Communications – all backed by professional consulting capabilities and one of the world's most connected IP networks. To learn more, please visit [verizon.com](http://verizon.com).
