

Stand Out from the Crowd

Make Sure that Your Application Delivers Best Performance with Our Application Performance Testing

Do not be just anybody. Make sure you stand out by ensuring that your application runs smoothly. Our Application Performance Testing Services are designed to help you stand out of the crowd by not having to be concerned with performance.

We will provide you with the necessary technical know-how and our long-established expertise in a consistently, efficiently, and effectively manner. Do not hesitate, act proactively.

Best Service for Best Results

Our Application Performance Testing Service is designed to provide you with most benefit. Our goal is to identify risks which can have an impact on your application performance and thus also on your overall business performance. Be prepared and act proactively. To do this, we apply our repeatable holistic approach including the following elements:

- **Discovery**
- **Assessment and Planning**
- **Script Creation**
- **Smoke Test**
- **Test Execution and Data Collection**
- **Test Reporting**

Be **proactive** and not reactive.

AVIANET will provide you with redundant hardware failover testing as well as application and infrastructure stability during the test phases. In addition, we will stress test the system to its breaking point for the purpose of detecting bottlenecks or weak links through tests and actions which are divided into the following four main categories:

- **Baseline Test:** The purpose of this test is to gain a performance baseline to see if the performance improves or degrades after changes are applied.
- **Load Test:** This test helps to see how many users the application can handle before undesirable behavior occurs when the application is subjected to a particular workload. In addition, this test identifies how much data the Database, Fileserver and Network can handle.
- **Stress Test:** The purpose of this test is to assess what happens if the production load exceeds the anticipated load and what kind of failures should be planned for. This test is also used to provide indicators to look for in order to prevent or intervene, for example denial of service attacks.
- **Endurance / Soak Test:** This test is run over many hours and looks to identify the consistency of performance over time and if gradual growth issues are identified.

Your Benefits

Our holistic approach guarantees that you will receive the most benefit. After each performance test, we will provide you with a Performance Test Analysis Report including final results and offer you a Test Report Review Meeting. In addition, we will give recommendations on appropriate remediation steps.

Consider that service downtime can damage **brand value** and **consumer confidence**.

This solution is brought to you in collaboration with Verizon.

Verizon delivers a wide range of Cloud, Security, Machine-to-Machine, Mobility, Networking, and Advanced Communications – all backed by professional consulting capabilities and one of the world's most connected IP networks. To learn more, please visit verizon.com.
