

### Be One Step Ahead – Know What Is Going On in Your Network

**Our Vulnerability Assessment Services help you identify information security risks occurring through Internet-driven traffic. Be proactive and do not let others harm your business.**

Are you aware that security risks concerning your protected information are everywhere? With our Vulnerability Assessment Services you are prepared to detect potential hazards to your network integrity. Our holistic approach helps you identify the direct impact to your business that

Internet-driven traffic can have. Trust in our three step assessment procedure. We will identify potential risks, analyze them, and provide you with an action plan to limit the vulnerability of your network.

**AVIANET's Assessment of External Risks:**

- Identification of unnecessary services
- Update status analysis of software
- Examination of unusual configurations
- Use of an automated vulnerability scan utilizing your IP addresses
- Documentation of the findings in an assessment report

It is not just your business facility where you communicate and connect to others; it is also outside – often through the Internet. Therefore, that is also a risk. You cannot control the traffic that passes in and out of your network. Not all traffic is good. Think of your vulnerability. Where are the loopholes for cybercrime in your network?

Our Vulnerability Assessment Services can help you to overcome network-related threats. We will identify potential risks by analyzing the Internet traffic as well as your Internet-facing network infrastructure (e.g. servers, ports, and protocols). Then, we give you recommendations on how to reduce those risks.

**Three Steps to Assess Your Business Vulnerability**

We will provide you with a detailed description of the risks and work with you to overcome the most critical areas. One part is our **External Risk Assessment** which is free of any software installation. As a result you gain an assessment report including detailed analysis results and recommendations for further actions.

On top of that we suggest you our **Virtual Discovery and Classification** to help you understand how your network works. To do this, we monitor the traffic going to and from your perimeter network.

Afterward, we provide you with an **Analysis of the Findings** to discover potential areas for improvement (e.g. irregular activities, unusual traffic, or atypical transactions). We will present these to you with an action plan for further steps to be taken. Thus, you know where your vulnerabilities are and how to overcome them. Be proactive and do not act in a reactive manner – protect your valuables.

Choose our **holistic approach** to identify information security risks that can harm your business.

**Features:**

- Our services include assessment, design, architecture, and training services covering the network and application layer
- We designed customizable services to meet your requirements
- Benefit from our vendor and product neutral approach

**Benefits:**

- Understand your network and application vulnerabilities and exposures
- Meet information security requirements
- Establish a clear risk classification and actionable recommendations

**See the Bigger Picture**

Trust in our expertise as we have done it before. Vulnerability Assessment is a crucial part to ensure that your network is of integrity. Only then can you work in a confident way to push your business forward. Our Vulnerability Assessment Services are one piece of the puzzle to secure your continuous business performance. We help you to see the bigger picture by showing you where your network integrity is at risk. By detecting potential hazards you have the ability to act proactively. Do not let others harm you, be one step ahead.

**Value Proposition:**

- Understand external, internal, physical, and social threats that can allow an attacker to compromise your sensitive data and business systems
- Support information security program requirements
- Assist with the most difficult operation of a security program: justification of security budget requirements

Be **confident** with your network integrity to focus on your **performance**.

This solution is brought to you in collaboration with Verizon.

Verizon delivers a wide range of Cloud, Security, Machine-to-Machine, Mobility, Networking, and Advanced Communications – all backed by professional consulting capabilities and one of the world's most connected IP networks. To learn more, please visit [verizon.com](http://verizon.com).

**About AVIANET**

- **Registered Head Office:** Munich, Germany (HRB 120781)
- **Head Office Address:** Josephspitalstr. 15 – 80331 Munich, Germany
- **Part Of:** The world's leading aviation service company – AVIAREPS AG
